SYSTEMS ENGINEER

DevOps Engineer with a cybersecurity background, skilled in automating infrastructure, modernizing CI/CD pipelines, and managing secure cloud environments in Azure. Experienced in Terraform, Ansible, and GitHub Actions, with a track record of supporting NIST and CMMC compliance initiatives for both enterprise and DoD

SKILLS AND EXPERTISE

Azure • AWS • Azure DevOps • GitHub • GitHub Actions • Ansible • Terraform • Powershell • CICD • ARM Templates • JSON • Git • Python • Java • Perl • HTML5 • PHP • CSS • Batch • MySQL • Windows • Linux • Routing Concepts • Visual Studio • Virtual Machines • vCenter • Docker • Firewalls • Nexpose • CrowdStrike

PROFESSIONAL EXPERIENCE

Altera Digital Health

Systems Engineer

4/2023 – 10/2025

Served as a DevOps member supporting continuous integration, automation, and infrastructure management across cloud, security, and development environments.

- Managed virtual machines in Azure for development teams
- Built and maintained automated development environments using Terraform and Ansible.
- Migrated build pipelines from AppCenter and Azure DevOps classic editors to YAML-based workflows in GitHub Actions.
- Designed and developed an AI-powered documentation search website that provides users with intelligent, conversational answers to product questions.
- Implemented and managed SAST, DAST, and SCA scanning processes, providing actionable security reports.

CastleLock

Cybersecurity Engineer

6/2020 – 10/2022

Worked directly with Department of Defense (DoD) contractors in multiple security and IT areas. Enabled DoD contractors to reach desired CMMC compliance level.

- Assessed and implemented client IT and Security policies and procedures to meet the CMMC requirements.
- Created and maintained CIS Baseline scan templates in Nexpose to monitor server security compliance across customer networks; Monitored and remediated vulnerabilities discovered across clients networks.
- Designed a FIPS compliant backup architecture for customer's critical systems.
- Assisted in an enterprise-wide firewall review to ensure customer's network only allowed approved connections (deny by default).
- Developed Cybersecurity Awareness training and implemented practical exercises for compliance.

Allscripts

Systems Engineer

6/2016 – 2/2020

Leveraged Powershell, ARM templates, Packer, and other scripting tools to manage environments for both internal teams and external clients in Azure.

- Created and deployed ARM Templates for Azure environments for use by internal teams and public-facing labs for external clients; Responsible for ensuring appropriate security standards for all environments.
- Created/managed server images; Wrote/maintained Azure automation scripts in Powershell /Azure Runbooks.
- Assisted in creating an Azure DevOps pipeline automating code check-in to build creation and deployment
- Managed over 1,000 virtual machines in vCenter and Azure for internal teams.
- Developed a dashboard for internal monitoring of test labs.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Networking & Cybersecurity (2016) – Champlain College
Microsoft Azure AZ-900 (2022)
